

Concrete Structure Cooling Tower

Concrete structure cooling tower manufactured by Seagull are high in quality and has an excellent performance. Concrete type structured have been widely used in the recycling water system of chemical, petrochemical, power, metallurgy, machinery industry and etc. The framework structure with long span is made of RC. The uniformity of water distribution and the lower resistance of air are consider while designing of the cross-section of beam and column to assure the strength and stability of tower are guarantee.

Features

- Non-metallic components
- Streamlining of air-flow field
- Low energy consumption in operation
- Low drift loss
- High-qualified draught device

Advantage

- High quality and economical
- Long life span, low vibration
- Easy maintenance, installation and erection
